goes unnoticed," said Saar Yoskovitz, Co-Founder and CEO of Augury. "Through this partnership Grundfos and Augury will work to make water a safer, more available and more useful resource for businesses, individuals and even nations worldwide."

"We have spent the last eight years working with manufacturers and utilities to ensure that people around the world can always rely on the machines that matter and have seen first-hand the impact it brings. I am thrilled to be partnering with Grundfos to bring this impact to a wider market."

"Our applications knowledge has consistently been the key differentiator for us to provide best-in-class pumping solutions to the world. As we prepare our portfolio for the future, it is key that we leverage this knowledge base to build more intelligence, IoT, remote monitoring and advanced diagnostics into our offerings to ensure differentiation, which is one of the highest priorities for Grundfos," said Anupam Bhargava, Group Vice President, Industry at Grundfos.

About Grundfos

Grundfos develops water solutions for the world, setting the standard in terms of innovation, efficiency, reliability, and sustainability. Their solutions help partners and customers move water to where it is supposed to go, providing drinking water for the smallest villages and the highest skyscrapers, treating and removing wastewater and bringing heat and comfort to the world – or cool it down if needed. For the past 75 years, Grundfos' mission has been to make the highest quality, most reliable equipment.

About Augury

Augury is building a world where people can always rely on the machines that matter. Augury supports its partners by enabling Digital Transformation through superior insights into the health and performance of the machines they use to make products, deliver services and improve lives.

ON THE OCCASION OF SALONE DEL MOBILE 2020, KREOO CHANGES ITS LOCATION AND MOVES TO PAVILION 3 XLUX

Kreoo was created in 2010 from the experience of Decormarmi, a remarkable reality in the Italian marble panorama, as the development of a talent that has always distinguished the company: the ability to cooperate with designers and architects, in a synthesis of craftsmanship and design culture, to turn marble into protagonist of contemporary design.

Art direction of the booth and design of some of the new products have been committed to Matteo Nunziati, one of the most influential international figures, among the architects and designers of his generation.

"Showing Kreoo's skills in marble fabrication by creating an elegant home environment. This is the concept from which the booth project was designed: the aim is to let people gradually discover the features and know-how of Kreoo, by driving them to a complete immersion in the spaces and letting them identify as users of this design horizon," said Matteo Nunziati.

Bathtub and Freestanding sink Hug designed by Matteo Nunziati

Designing a sort of embrace between the two most popular natural materials, wood and marble, was the original idea for Hug collection, characterised by a perfect balance between these two identities, despite being completely different, are enhanced reciprocally in their diversity. Marble gives richness and solidity to the pieces and eucalyptus wood allows cavities, creating open spaces where objects can be stored. The Hug line, as the name says, is the result from the encounter between elegance and functionality.

Pluvio Table designed by Matteo Nunziati

The Pluvio table is designed with reference to the artistic movement of Surrealism, an avant-garde current of the twentieth century. Surrealist art is based on that process in which the unconscious emerges during dreams by generating visions that transfigure reality and create

emotional reactions in the viewer. The table is framed by a metal profile that also identifies its legs. The base is made of marble, as well as the top that appears liquid, as rippled by an invisible drop fallen from the sky. This surprisingly elegant effect is achieved with profound artisanship. The idea is to design a product in balance among technical ability, surprise, refinement and elegance, offering a contrast between the solidity of stone and the fluidity of water.

Lily sculpture designed by Tobia Berti for Decormarmi

The sculpture Lily is an elegant and sinuous furnishing statement piece: the genesis of an organic floral form becoming an anthropomorphic synthesis. A thin veil merging into an oval body, gathering the light and declining it into every inch of its surface, a story of what marble is, mutable and delicate.
